Treasure Valley Futures, September 1999 to April 2002. Client: Community Planning Association of Southwest Idaho (COMPASS).

Doherty & Associates served as the project manager for the Treasure Valley Futures Project. The project involved over twenty local private and public agencies in the study of development patterns and their effect on the transportation system. The primary purpose of this project was to educate urban and rural residents, elected officials, and members of various public interest groups about alternative choices to current development patterns, to identify the barriers to choosing these alternatives, and to define realistic tools for overcoming these barriers. The project was funded by a \$510,000 grant from FHWA. The firm guided the project's overall direction, organized public involvement activities, constructed media kits, orchestrated media days, coordinated development of the project website, and maintained a project library. We monitored the one-half million dollar project budget, maintained a master schedule of goals and deadlines, managed all consultant contracts, reviewed work to date and coordinated payments for consultant contracts with Community Planning Association of Southwest Idaho.
