

## Targeted Employment Area Designation

The Idaho Department of Labor is designated by the governor to certify the geographic areas or political subdivisions that conform to targeted employment areas as defined by 8 CFR 204.6 (e)(i),(e)(ii) and f(2), f(3).

### *Definitions*

**Targeted Employment Area:** An area which, at the time of investment, is a rural area or an area which has experienced unemployment of at least 150 percent of the national average rate. The amount of capital necessary to make a qualifying investment in a targeted employment area within the United States is \$500,000.

**Rural Area:** Any area not within either a metropolitan statistical area as designated by the Office of Management and Budget or the outer boundary of any city or town having a population of 20,000 or more.

**High Employment Area:** A part of a metropolitan statistical area that at the time of investment (i) is not a targeted employment area and (ii) is an area with an employment rate significantly below the national average unemployment rates. The amount of capital necessary to make a qualifying investment within the United States as defined in section 203(b)(5)(C)(iii) of the Act, is \$1,000,000.

### Methodology

Under the federal definition of targeted employment area the Idaho Department of Labor certifies any rural area within the state as a targeted employment area, excluding rural county cities with populations of 20,000 or more that have unemployment rates falling short of 150 percent of the national average unemployment rate. All official metropolitan statistical areas are also excluded unless a geographic area or political subdivision within the metropolitan area – such as counties, cities, census tracts, census blocks or a combination – have in the aggregate an unemployment rate at least 150 percent of the national unemployment rate. The department will calculate these combinations on a case by case basis as requested.

To be designated targeted employment areas at the county level, all counties except those counties included in metropolitan statistical areas qualify. Cities with populations in excess of 20,000 located in rural counties are excluded from the designation unless the 150 percent national average unemployment provision is met.

Cities, census tracts, blocks or townships with rates of at least 150 percent of the national average unemployment rate located inside metropolitan statistical areas are automatically designated as targeted employment areas. A census tract or a combination of contiguous geography may be

designated a TEA for as long as the combination of the unemployed divided by labor force for such an area is at least 150 percent of the national average unemployment rate for the preceding 12 months of available labor force data. The 150 percent of the national average unemployment rate used for this year's determination is 11.35 percent. Upon request, the Idaho Department of Labor will calculate whether a combination of census tracts make up a qualifying contiguous geographic area with 150 percent of the national average unemployment rate. If a region qualifies, the department will provide a letter to the requesting entity designating the region as high unemployment area for its submission for EB status to the Department of Homeland Security.

For high unemployment census tracts the labor force data sets used to determine the national average unemployment rate consist of benchmarked data from July to December and the available preliminary data from January to June. For computational purposes, TEA determinations are made in November of each year to be effective during the following full calendar year.

**Target Employment Area Designation for year 2010.**

Areas in gold are Targeted Employment Area designations (\$500,000 EB-5). Colored areas represent metropolitan statistical areas or larger rural cities (\$1,000,000 EB-5).
